**A Register of Standards, Codes of Practice,
Guidelines Recommendations and
Similar Works relating to Preservation and
Conservation in Libraries and Archives**

Compiled by

John McIlwaine

on behalf of the IFLA Preservation and Conservation Section

March 2005

Foreword

In 2002, the Standing Committee of the Preservation and Conservation Section of the International Federation of Library Associations and Institutions (IFLA) proposed to the IFLA Governing Board a project to compile a register of standards and other works that provide specific guidance and structured advice for libraries and archives in the practice of preservation management and conservation. At first, the committee hoped to find a consultant available to take on this task. However, when the then chair of the committee, John McIlwaine, stepped down from the post, he offered to take on this project, with the assistance of the Standing Committee and the officers of the IFLA Core Activity on Preservation and Conservation (IFLA PAC). The initial compilation was published on IFLANET in March 2005.

The title of the register is borrowed, of course, from the Hippocratic Oath, which enjoins doctors and medical professionals to consider first whether a proposed course of treatment will harm a patient rather than heal. It has become the mantra of conservators in the United States and probably elsewhere, which follows a recognition that past conservation practices, often applied in good faith with the knowledge available at the time, have actually done more harm than good to an item in the long run. One has only to think of early lamination or of the past applications of certain tapes or glues to understand the concept. Present thinking is that it is better to retain as much of the look and feel of an original as is possible and to undertake no procedure that cannot later be undone, should new and better techniques become available.

The Standing Committee's intention is to keep the register both *up-to-date*, emphasizing the literature of the last decade, and *focused*, in order to provide a listing that is relatively compact and can be browsed in its entirety by users interested in discovering works in specific areas of preservation and conservation. Although the current publication cannot be searched online, the committee hopes that at some time in the near future, IFLANET will add a capability to handle databases, at which time the committee hopes to convert this text to a searchable database that can be easily and constantly updated. Further, the committee is especially interested in the inclusion of translations of relevant standards into the five official languages of IFLA, so as to make the register even more useful to the international community.

The committee is most grateful to John McIlwaine for his interest and energy in creating the initial compilation and continuing to work on it, while the committee establishes a process for its continuance. The committee plans to maintain the currency of the data by regularly revising the text. Suggestions for inclusion of material and information on changes of postal and electronic addresses are welcome and should be sent to the Information Coordinator of the Section, whose address can be found on IFLANET at <http://www.ifla.org/VII/s19/index.htm>.

Introduction

The task of compiling a register of standards and other works of a similar nature in the field of preservation and conservation is daunting, especially when it is intended to be useful in an international context. Over time, the goal of this work is to be comprehensive in the sense of including citations to translations of documents in addition to the original sources, while still being relatively compact, current, and focused. In order to achieve this, several categories of sources have normally been **excluded**, such as:

1. Documents that discuss aspects of preservation and conservation and from which data standards, manuals, etc., may be drawn, but are not in themselves standards or manuals, e.g.:

- Technical reports on particular problems and processes
- Proceedings of conferences
- Surveys of institutional practices

2. Standards and manuals that are concerned with technical equipment, materials and processes, but are not exclusively or largely examining these in a preservation or conservation context, e.g.:

- Standards for digital cameras and scanners
- Standards for papers, boards, cloths, etc.
- Standards for film emulsions
- Standards for metadata

3. Guidelines that provide general treatments of topics, such as library and archive buildings and collection management, but are not specifically focused on preservation aspects, or which treat such topics as disaster management or digitization in general, but are not specifically focused on libraries and archives.

Coverage of such sources is available elsewhere in the literature. There is a discussion of general bibliographical sources below, and specific bibliographical guidance is noted under the major subdivisions of this register.

Date range. Emphasis is on works issued, whether in printed or electronic form, within the last ten years (i.e., since 1995). Earlier sources can be traced in the two titles listed below by the UNESCO Memory of the World Programme, compiled in 1997, and by Dodson & Wellheiser (1996). Significant earlier works are included in the present listing where they are deemed to be especially helpful or on topics where they have not been superseded by later sources. Examples include the various publications issued under the RAMP (Records and Archive Management Programme) of UNESCO in the 1980s and 1990s, particularly as these are often available in several different languages; indeed, many of them have been reissued in 2004 by UNESCO on its CD-ROM “Preserving Documentary Heritage: A Tutorial” (see below).

Fact sheets. An increasing number of relatively brief texts, variously entitled pamphlets, leaflets, fact sheets, etc., are being produced by organizations and are often made available on

their websites. Key examples of these are included in this register, since experience suggests that other institutions find such texts useful to translate and/or adapt for their own internal purposes. Additional titles in this category are available on the websites of these organizations:

American Institute for Conservation of Historical and Artistic Works (AIC)
Arts & Humanities Data Service (AHDS), UK
Canadian Conservation Institute (CCI)
Library of Congress (LC)
Museums, Libraries & Archives Council (MLA), UK
National Archives & Records Administration (NARA), USA
National Archives of Australia (NAA)
National Fire Protection Association (NFPA), USA
Northeast Document Conservation Center (NEDCC), USA

URLs and links are provided to all of these in the list of contact organizations.

Languages. While the majority of sources listed are in English, a major effort has been made to include works in the other four official languages of IFLA: French, German, Spanish, and Russian. Works in other widely spoken European languages, namely Italian and Portuguese, are also included, but not material in the languages of Northern and Eastern Europe, nor in non-European languages. It is, of course, possible that the register may be expanded in the future to encompass some of these.

Availability. The register is intended to emphasize the availability of the source listed. It notes the existence of translations, of electronic as well as printed versions, and of the actual availability of printed versions, with the inclusion of ISBN/ISSNs and indications of price/free availability at the time of initial compilation (early 2004). A list of addresses and other contact details of the most significant institutions responsible for producing the sources is included at the end of the file. Contact details for institutions responsible for only single items are given in the relevant entry.

Sources used. The following sources are among those used in the compilation of this register. These remain important to consult, both for tracing earlier publications and for their subject arrangements, which offer alternative approaches.

Bibliography of standards and selected references related to preservation in libraries. (Originally compiled February 1996; revised April 1996). <http://www.nlc-bnc.ca/8/14/index-e.html#index>. Includes sections for Preservation and access; Paper-based collections/records; Film-based collections/records; Optical and magnetic collections/records; Environmental control; Exhibition; Health and safety; Security; Emergency planning and response. Appendices include: bibliography of selected references; Selected electronic resources; List of organizations that develop standards relating to preservation in libraries; Directory of selected useful technical and professional organizations. By far the fullest guide to the literature to its date. Includes many more general references not specifically related to standards, than the present register. Emphasizes North American publications and sources of information.

UNESCO. Memory of the World Programme. *Safeguarding the documentary heritage: a guide to standards, recommended practices and reference literature related to the preservation of documents of all kinds*, prepared by the International Advisory Committee for the UNESCO Memory of the World Programme, Sub-Committee on Technology for the General Information Programme and UNISIST, UNESCO, ed. George Boston. Paris, UNESCO, 1998 (CII-98/ws/4). 56pp. Also available at: <http://www.unesco.org/websorld/mdm/administ/en/guide/guidtoc.htm>. Includes sections for general preservation factors; Paper & other traditional materials; Photographic materials; Mechanical carriers; Optical media; Electronic publications, electronic documents and virtual information. These contain useful expository text of the issues involved, a list of major ISO and some national official standards and a limited number of other references.

Recently published general bibliographies:

These works cover the whole conservation and preservation area:

Croft, JeanAnn. The preservation evolution: a review of preservation literature, 1999-2001. *Library resources and technical services*, 47, 2003, 59-70. Continues Jordan. 94 references.

Continuing sources:

Art & Archaeology Technical Abstracts (AATA) online: abstracts on international conservation literature. <http://aata.getty.edu/NPS/>. Comprehensive database of 100,000+ abstracts of literature related to the preservation and conservation of material cultural heritage.

BCIN (Bibliographic Database of the Conservation Information Network) <http://www.bcub.ca/English/bcin.html>. Launched in 1987 by the Getty Conservation Institute and the International Centre for the Conservation and Restoration of Cultural Property (ICCRP) as a subscription database, available through the Canadian Heritage Information Network (CHIN). Since May 2002, available free of charge on the Conservation Information Network website hosted by CHIN. "The Web's most complete bibliographic resource for the conservation, preservation and restoration of cultural property." Only available for specific searches on authors, topics, etc., rather than browsing.

COOL (Conservation OnLine: Resources for Conservation Professionals) <http://palimpsest.stanford.edu> "A full-text library of conservation information, covering a wide spectrum of topics of interest to those involved with the conservation of library, archives and museum materials." A vital source to which specific references are made in this register.

GRIP (Gateway for Resources and Information on Preservation). <http://www.knaw.nl/ecpa/grip/>. Maintained by ECPA (European Commission on Preservation & Access) and the Nationaal Archief (National Archives of the Netherlands). “Contains selected and annotated references to literature on preservation-related topics, links to websites, projects, organizations and discussion groups. GRIP presents a core of accessible and recent materials selected by experts and provides an introduction to a great many aspects of preservation. The database can be searched by category, keywords (descriptors) and free search. For searching by descriptor, a thesaurus is used based on part of the Art & Architecture Thesaurus (AAT) of the Getty Research Institute.” The site is scheduled to be regularly updated. Categories searchable (as of Sept. 2004) are: *Policies*: International cooperation; Preservation policy; *Materials*: Paper; Photographs; Audio-visual; Optical disks; Ink jet prints; Magnetic tapes; *Prevention*: Pest control; Climate control; Storage; Handling; Disaster preparedness; Security; *Reformatting*: Microfilming; Digitization; *Deterioration*: Accelerated aging; Sticky tape syndrome; Ink corrosion; Vinegar syndrome; Life expectancy; Air pollution; *Treatment*: Deacidification; Paper splitting; Freeze-drying; Laser cleaning; *Digital preservation*: General resources; Emulation; Encapsulation; Migration; Copyright; Metadata; *Other*: Documentation; Standards. Some imbalances of coverage (e.g., “Ink corrosion,” 341 references; “Disaster preparedness,” 15 references) result from the source databases used. Also includes the full text of *Preservation of archives in tropical climates: an annotated bibliography* by René Teygeler et al., Paris & The Hague, International Council on Archives, National Archives of the Netherlands & National Archives of the Republic of Indonesia, 2001.

Bibliographies on specific topics within the preservation field are noted in the register under the topic.

The following two journals lay particular emphasis on reviewing new standards and guidelines:

International preservation news. Paris, International Federation of Library Associations & Institutions (IFLA), Core Activity on Preservation & Conservation (PAC), 1987- . 3 p.a. ISSN 08904960.

NPO e-journal. London, National Preservation Office, British Library, 2004- . <http://www.bl.uk/services/npo/journaltemp.html>. Continues: *Library conservation news*, 1983-1997. ISSN 0265041X and *NPO journal*, 1998-2003. ISSN 14614154.

Other international standards of relevance can be retrieved from the International Organization for Standardization (ISO) web site (<http://www.iso.org/iso/en/ISOOnline.opennerpage>) by searching sections such as ISO ICS (International Classification for Standards) 01, Generalities: Terminology. Standardization. Documentation; ISO ICS 85, Paper technology; ISO ICS 35, Information technology and ISO ICS 37, Image technology. The American National Standards Institute (ANSI) web site <http://www.ansi.org/> also lists all ISO standards and many other non-U.S. standards.

Digital Library Federation (DLF), USA. Registry of Digital Masters record creation guidelines. Version 1, July 2004. <http://www.diglib.org/collections/reg/reg.htm>. “The Registry of Digital Masters is intended to assist with access to digital materials as well as to provide a tool to help librarians reduce duplication of digitization and preservation efforts. The Registry is available through OCLC WorldCat and is based on the DLF Digital Registry documents and MARC 21. Created by a DLF/OCLC working group, the Guidelines can be used to create metadata for born digital and digitized monographs and serials, including materials that an organization will digitize in the near future. To be listed in the Registry, materials must be digitized according to standards and best practices with preservation in mind.”
